🧐 Unicode, formally The Unicode Standard, is an information technology standard for the consistent encoding, representation, and handling of text expressed in most of the world's writing systems. The standard, which is maintained by the Unicode Consortium, defines 144,697 characters covering 159 modern and historic scripts, as well as symbols, emoji, and non-visual control and formatting codes.

COLR/CPAL(v1) Font Formats - OTHER

Usage % of **all users** ?
Global 68.85%

COLRv1 is an improved version of COLRv0, this is also part of the OpenType specification. COLRv1 supports additional graphic capabilities. In addition to solid colors, gradient fills can be used, as well as more complex fills using other graphic operations, including affine transformations and various blending modes.

Notes Test on a real browser Known issues (0) Resources (8) Feedback

¹ Can be enabled with the "COLR v1 Fonts" feature flag under `chrome://flags`
² Firefox actively supports this format and will consider implementing it in the future: <https://mozilla.github.io/standards-positions/#font-colrv1>
