The “ingredients” for good design:

Setting the right context

Killing assumptions

Defining & defending the user benefits and the trade offs

But what do we mean by “good design”

Design that protects people

Design that is sustainable and makes the most out of the resources we have available

Design that caters to the particular needs of each user

Setting the right context

How many times have you reorganized your design team?

Once upon a time the Volvo UX team

“Any organisation that designs a system will produce a design whose structure is a copy of the organization’s communication structure”

- Conway’s Law

tools & forums to bring people
together to understand and rally
behind a human opportunity

Design Principles

Design for **safe display** of information

Design for **behavioural continuity**

Design to **empower**, not to outsmart

Design for **accessibility & inclusivity**

Design for **reusable knowledge**

Principles are communication and scalability tools. They work at their best when they are actionable, shaped by a broad spectrum of behavioural inputs and widely shared across all the groups inside an organisation that have a say in product definition

It sounds basic, but If we don't clearly separate technical, logistical and business challenges from user problems we are at risk of not identifying & solving a meaningful user centric opportunity

“The most profound technologies
are those that disappear.
They weave themselves into the fabric
of everyday life until they are
indistinguishable from it”
