Collaboration

Despite good intentions,
organizations tend to get in
the way of responsible design.

To practice responsible design,
we need to organize and align
teams around shared values,
instead of the org chart.

Our current beliefs and behaviors
prevent teams from trusting
each other and working together.

What are some limiting beliefs that come to mind when you think about cross-team collaboration?

"It will slow us down."

"We'll give you visibility."

"Management won't buy-in."

"Our roadmap is planned."

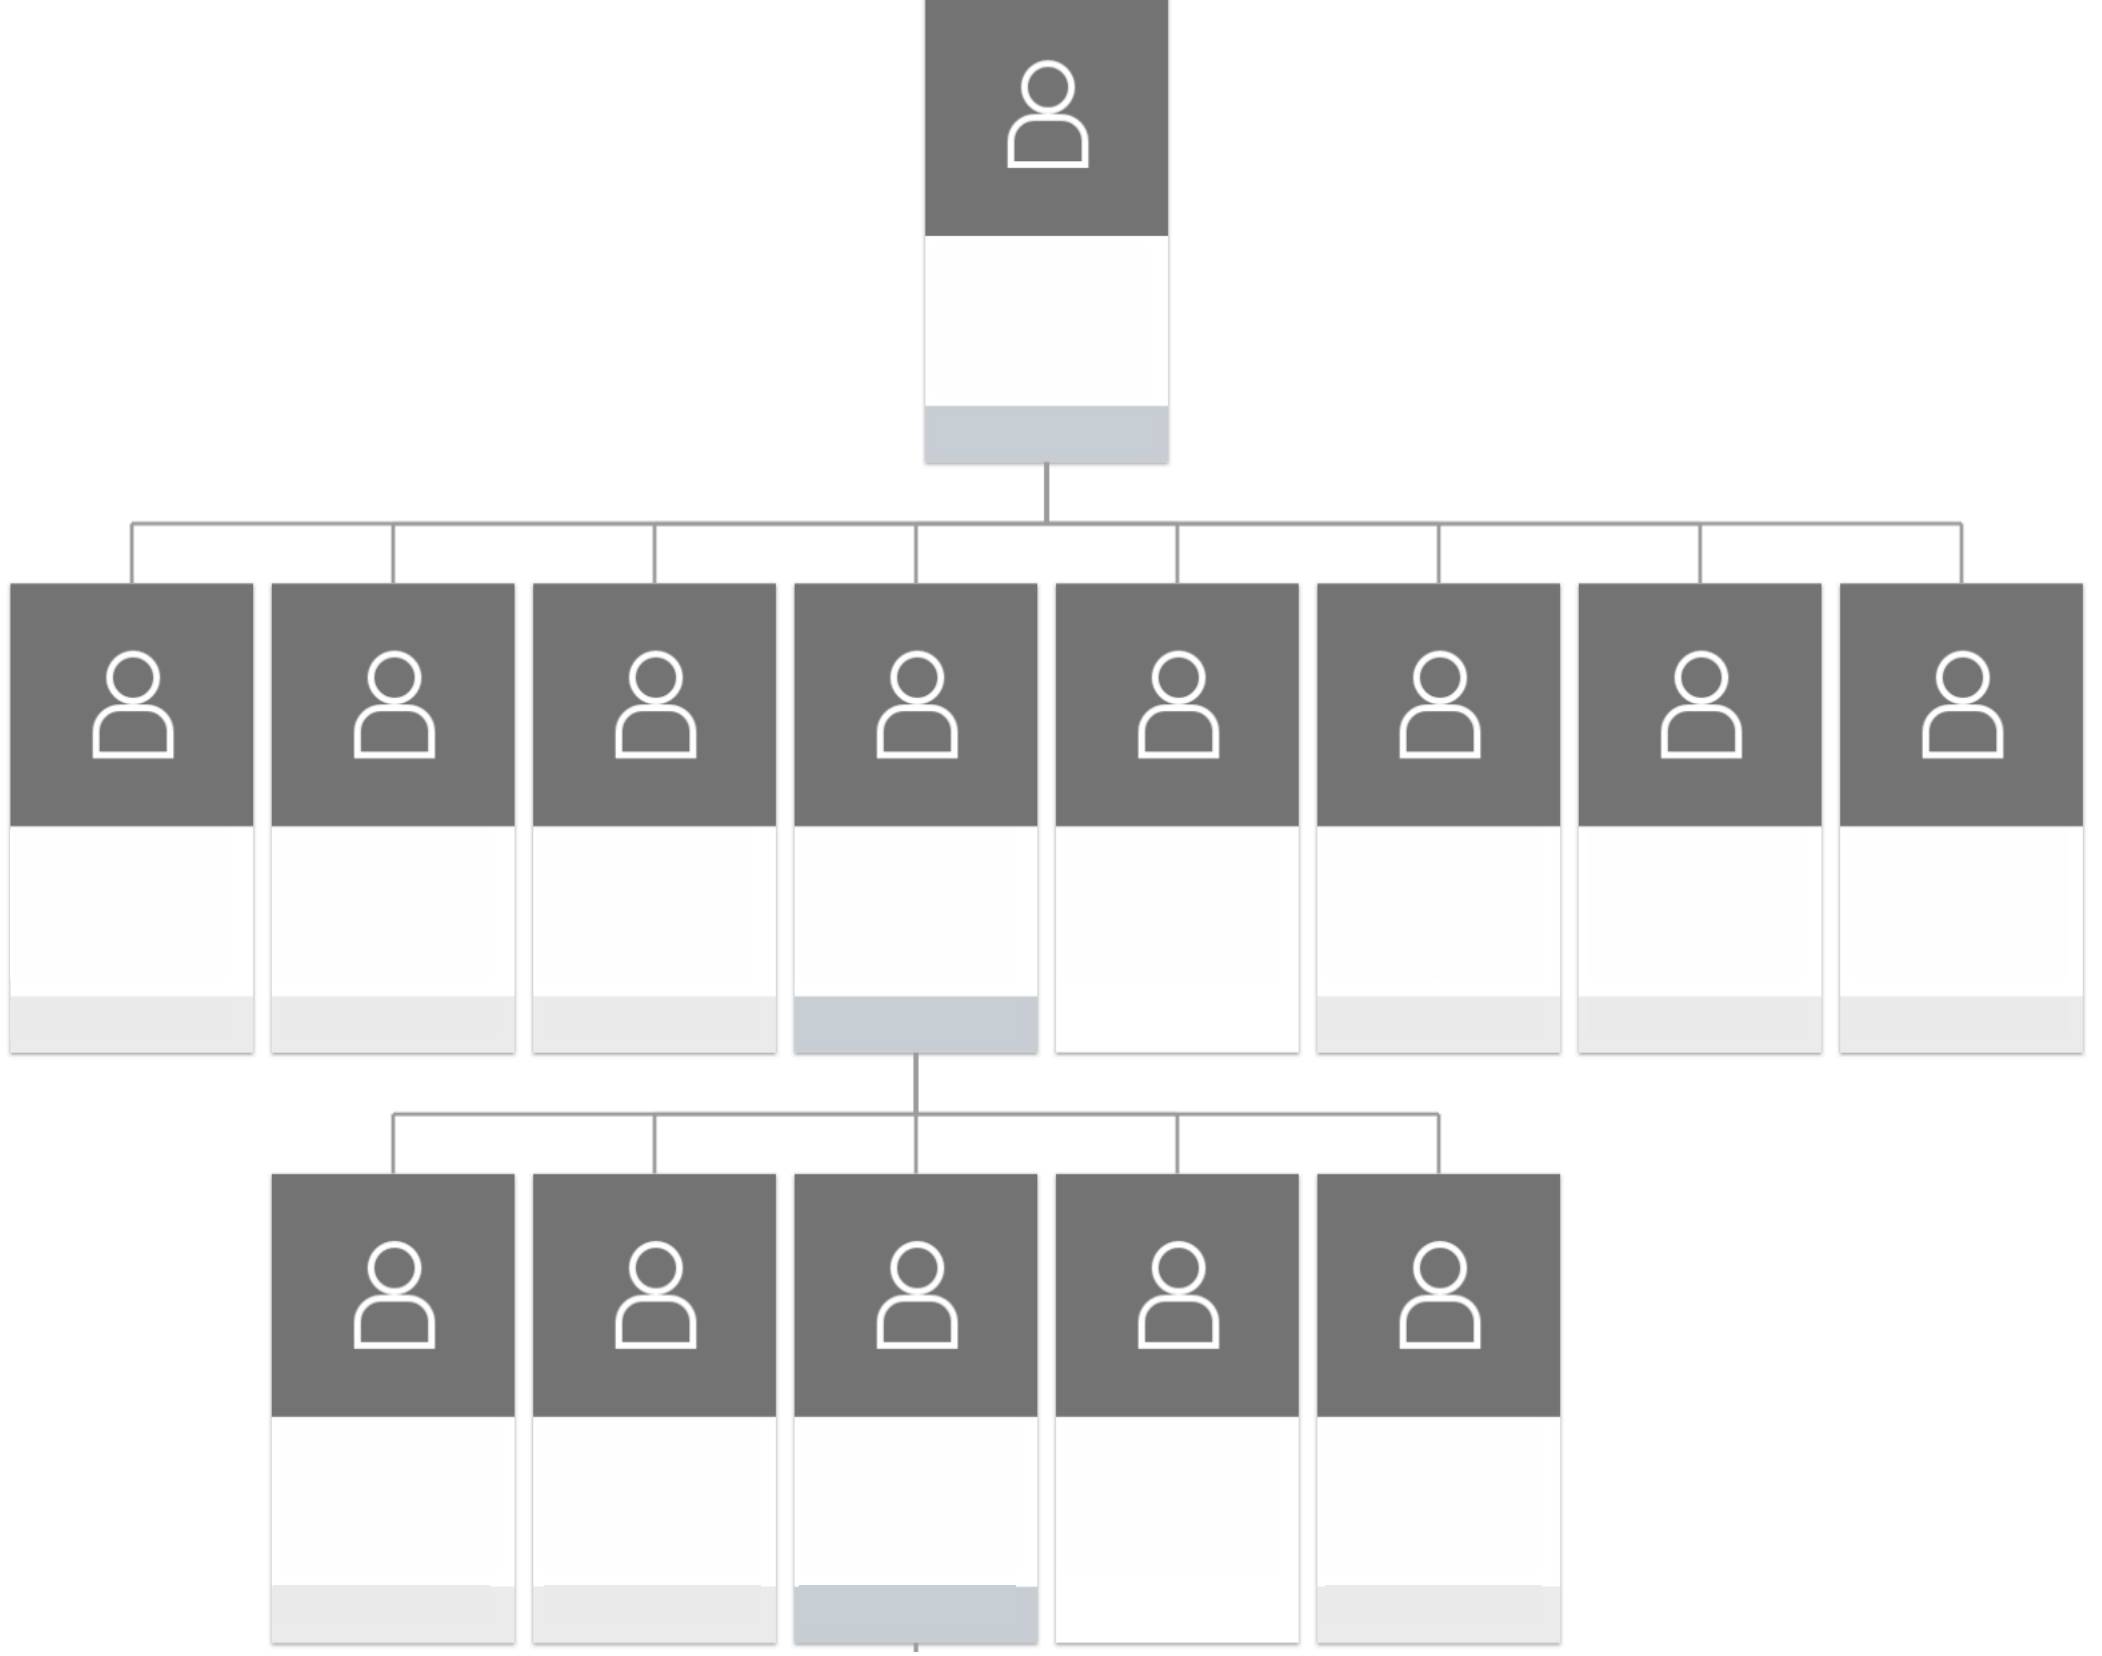

"We own this."

"We own this."

Design systems are any set of decisions governed across the organization.

Material Theming

Using Material Theming

Material Theming [↗](#)

What is Material Theming?

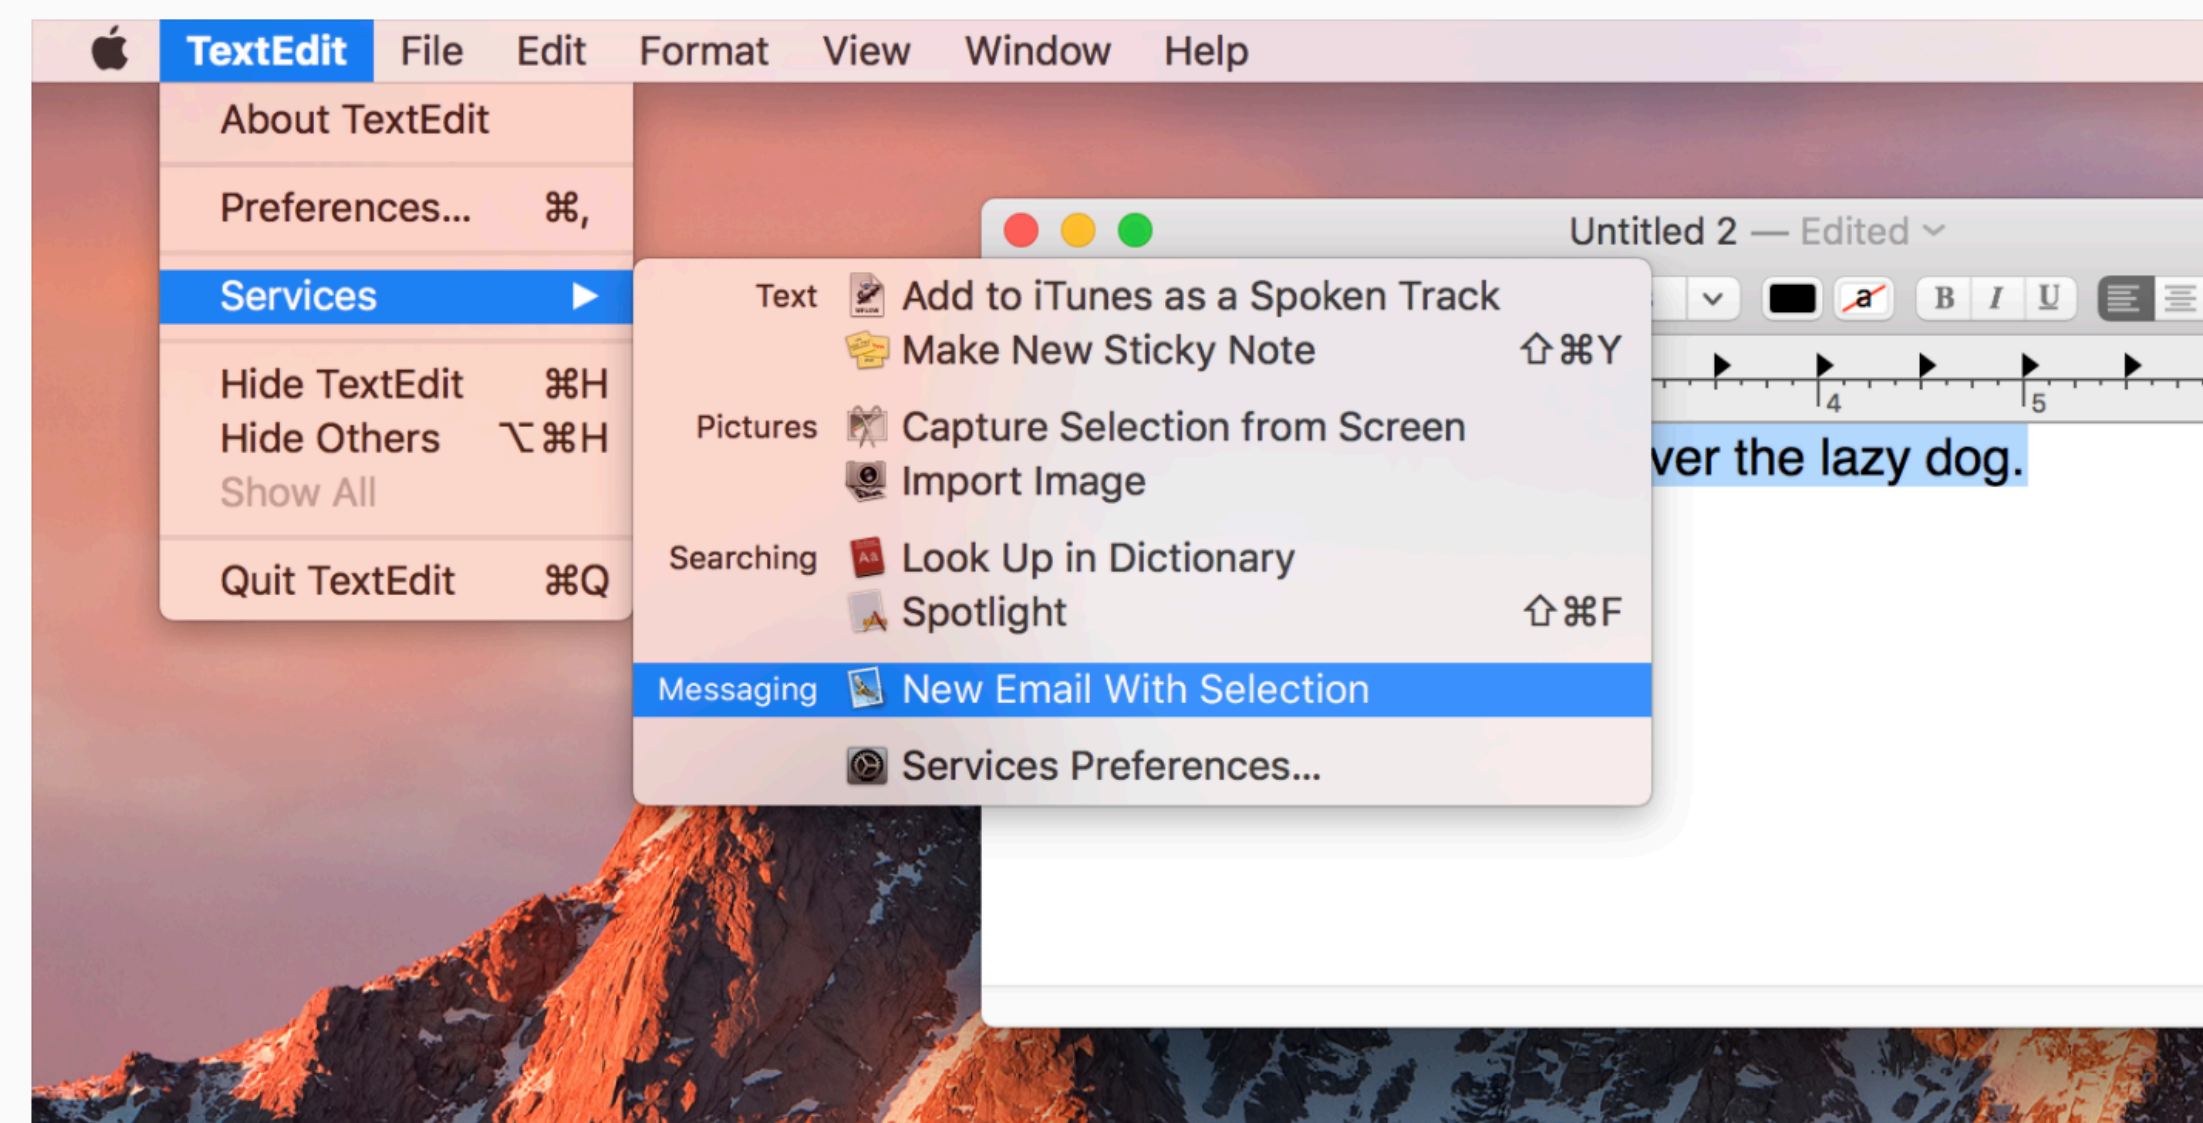

Material Theming is the ability to systematically customize Material Design to better reflect your product's brand.

Services

Services let people access functionality in one app from another. An app that provides services advertises the operations it can perform on particular types of data. The system then intelligently exposes its services in the app menu and in contextual menus that appear when Control-clicking text, files, and other kinds of data. For example, a service for creating a Mail message is available when you have selected text.

Give each service a short, focused title that describes exactly what it does. Strive to create a unique service title. If there are two or more services with identical names, the app name is automatically displayed after each service to distinguish them. When naming a service, use title-style capitalization and avoid definite and indefinite articles. Examples of good titles are *Look Up in Dictionary* and *Make New Sticky Note*.

Avoid providing an "Open in My App" service. People can use the Open With menu item

MANAGING EXPENSES

Billing products

Submit feedback or feature requests on the [Polaris GitHub page](#).

Retail experiences

Retail experiences are built for merchants selling products or services in physical locations. These experiences should feel **fast**, **simple**, and **reliable**. They also need to consider the staff, customers, and the physical environment.

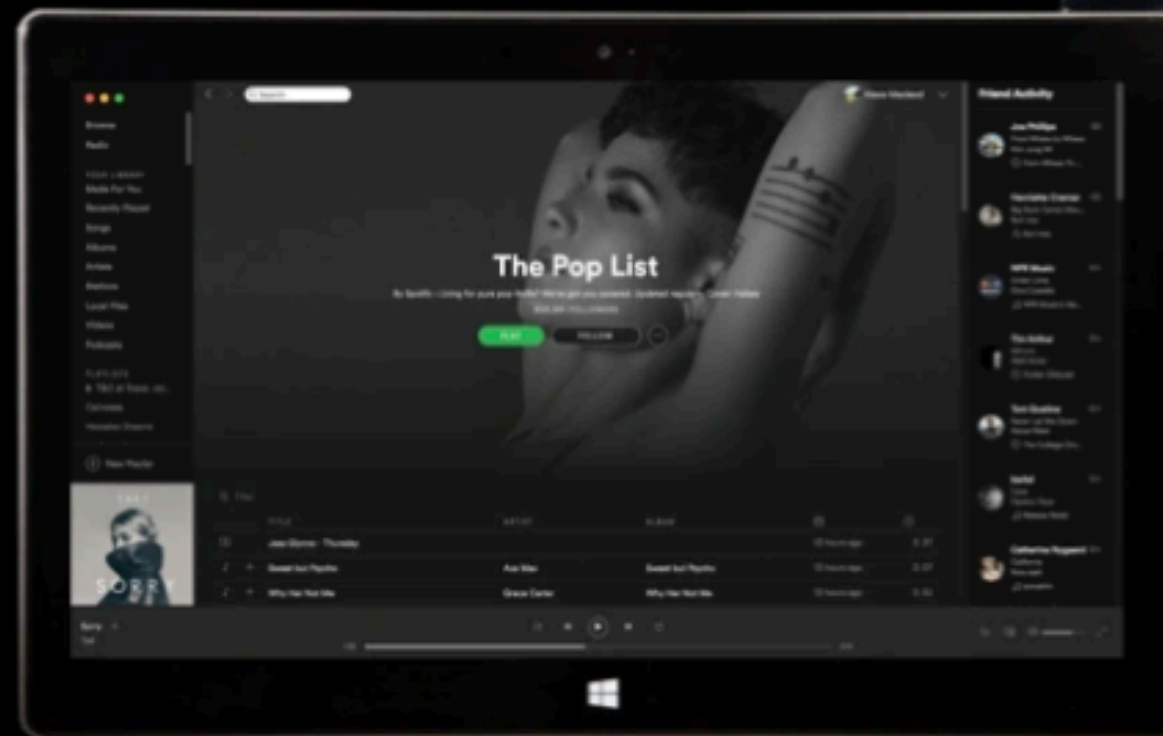

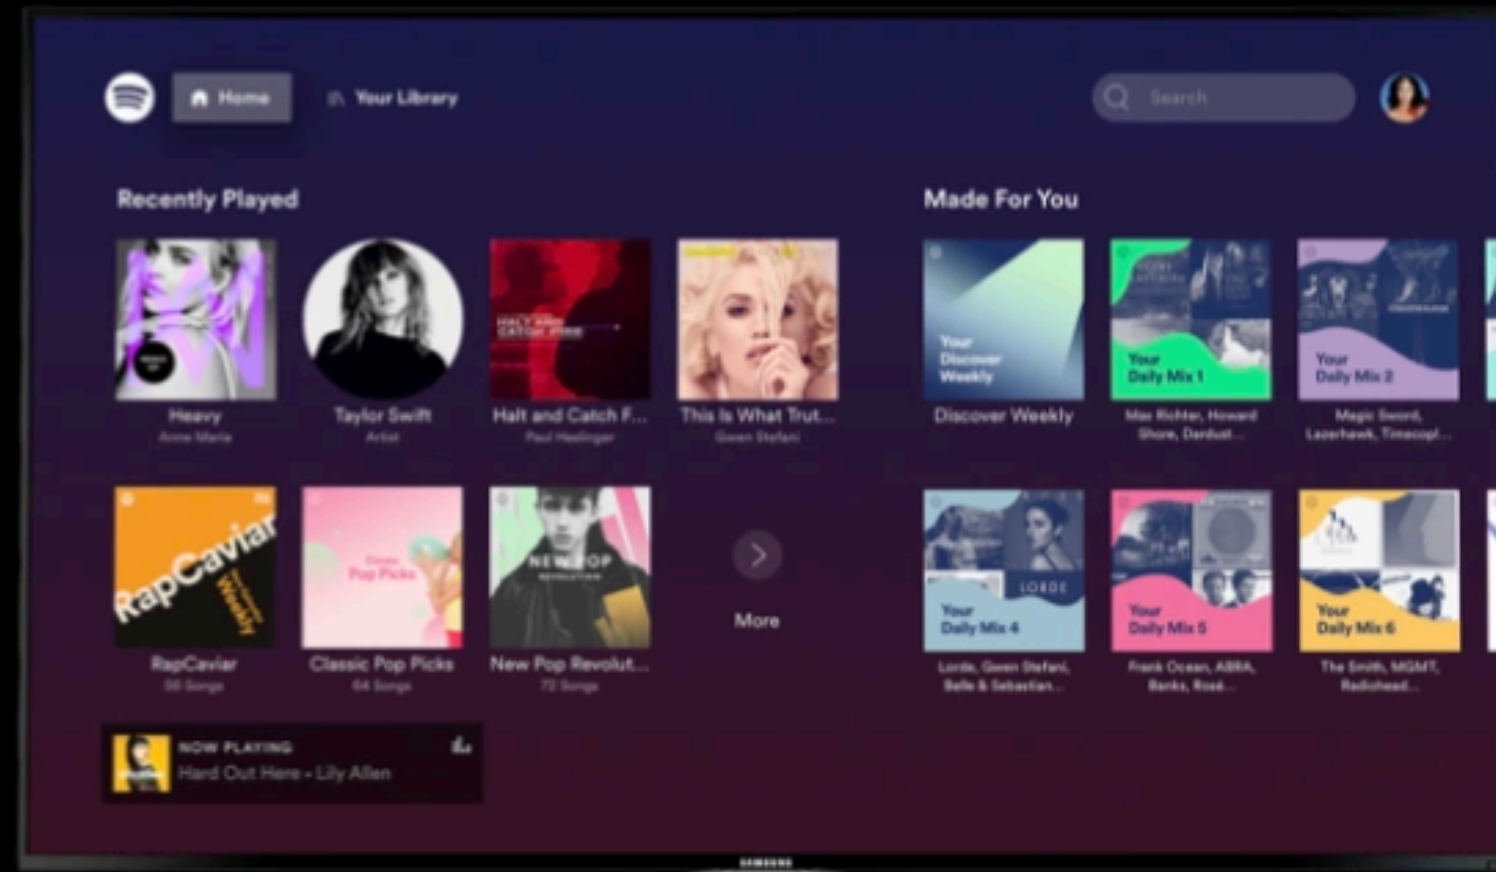

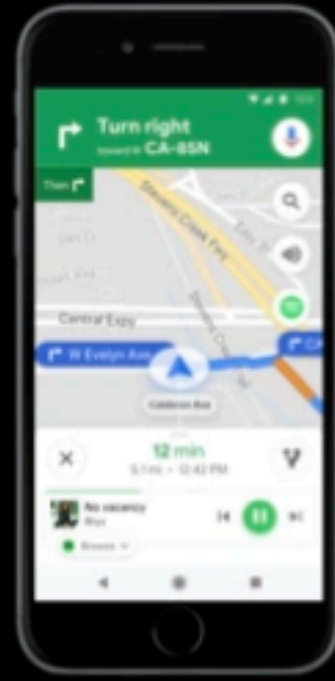

These guidelines will help you create experiences that are best suited for the retail environment.

Build for staff

Staff should feel confident

POS and other retail products should help staff get their jobs done with confidence. Retail environments can get chaotic, but staff members shouldn't feel like things are out of their control. Staff members should be able to complete tasks quickly and efficiently. This lets them focus their

it feels like one team."**

Becoming a
team of teams

Which relationships
get prioritized?

Start with just
one other person.

Encourage teammates
to get to know others.

Reframe limiting
beliefs into questions.

~~"It will slow us down."~~

**"What else might we value
as much or more than speed?"**

~~"We'll give you visibility."~~

**"What might other forms
of collaboration look like?"**

~~"We own this."~~

"Who can help steward this?"

Redesign the
organization.

Choose collaboration.

Thank you!
